Mr. Ylli Boja

Your new Real Estate website, it will provide advanced real estate search functionality that is powerful and customizable to match various requirements. You can show or hide any field from given fields, and you can customize the data that will be displayed in those fields. With Google Maps API integration that enables you to display Google Maps with properties markers on search results page, properties list & grid pages, property detail page, homepage, contact page and taxonomy archive pages.

The visitors also could compare properties feature that allow your website visitors to add properties to a compare pool and later compare those properties side by side. Visitor do not need to login to use this feature.

You will find one easy to use interface to add/modify/remove additional details related to a property. This feature can be used in many ways specially to add a certain type of information for which there is no other meta box available. You can add any number of floor plans related to a real estate property using an easy to use interface provided as part of meta boxes. You can provide various types of files (pdf, office documents, images etc.) as attachments to a property.
